

Rapidly increasing server rack densities and 24/7 uptime requirements will increase demand for liquid and hybrid cooling systems, including retrofits, these data center ...

The hot liquid can be air cooled directly in the rack using an in rack cooling distribution unit (CDU). A CDU can be placed at different heights within the rack to cool a specified number of servers, ...

The answer, more and more often, is liquid cooling. One of the most efficient methods is direct to chip cooling (or direct-on-chip cooling), which keeps processors at optimal temperature at all ...

In a mere 1- rack unit form factor, Supermicro NVIDIA MGX™ Systems can be equipped with up to 2 Grace Hopper Superchips and deliver the highest accelerated computing density in this ...

Liquid Cooling: The New Mainstream for AI & HPC Direct liquid cooling (DLC) or direct-to-chip (D2C) liquid cooling is the leading method of overcoming thermal limits and increasing compute density.

Great Lakes Water-Cooled rack cabinet provides an integrated closed-loop cooling system, saves on floor space, power consumption and maintenance. For free server cooling consultation call ...

A new liquid-cooling system is designed to meet the demands of AI infrastructure by improving thermal efficiency. It reduces energy and water usage by up to 40% and helps ...
